SUMMARY

Final-year B.Tech Computer Science student with strong interest in software development and problem-solving. Skilled in Java, SQL, and core computer science concepts including Data Structures & Algorithms, Object-Oriented Programming, and Database Management Systems. Experienced in building practical systems such as an AI-enabled hostel management platform and a disaster resource allocation system using Core Java. Seeking opportunities to contribute to software development projects while continuously improving technical and analytical skills.

EDUCATION

Academy Of Technology Maulana Abul Kalam University of Technology 2022 - Present

- Major : Computer Science.
- Current GPA: 7.4/10 (Upto 6th Semester)

Patha Bhavan School (12th) 2021 - 2022

West Bengal Council Of Higher Secondary Education

- Completed with 86.8%

Patha Bhavan School (10th) 2019 - 2020

West Bengal Board Of Secondary Education

- Completed with 93.57%

SKILLS

- **Programming Languages:**
 - Java, SQL, HTML, CSS
- **Core Skill:**
 - Core Java, DSA, DBMS, OOP, MySQL
- **Soft Skills:**
 - Team Collaboration
 - Leadership
 - Communication
 - Adaptability
 - Quick Learner

ADDITIONAL INFORMATION

- **Languages:** Bengali, English, Hindi.
- **Hobbies :** Sports | Swimming | Cycling

PROJECTS

- **Hostel Management System (AI-Enabled) :** Designed an AI-driven hostel management system integrating facial recognition attendance, automated entry–exit logs, mess scheduling, event management, and budgeting. Focused on system design, database architecture, and process automation.
- **Disaster Rescue Resource Allocation System (Ongoing) :** Building a multi-threaded Core Java system to simulate real-time disaster response and resource dispatch. Implemented priority-based scheduling using Priority Queue and concurrent task execution via ExecutorService. Designed deterministic resource lifecycle (dispatch → active → return) with live dashboard monitoring. Added reinforcement handling logic with backup resource integration and mission retry mechanisms. Currently extending system with WebSocket-based real-time dashboard and event-driven updates.
